### **ENERGY EFFICIENCY COMPLIANCE FORM**

**Application Number (Office Use):** 

Section 9.36 of the National Building Code of Canada

This form is intended to clarify the design direction chosen to comply with Section 9.36 of the current National Building Code of Canada (NBC) and ensure the minimum code requirements are met.

To be completed and submitted for review by a competent person\*

Occupancy Class				-					
Floor Area				Climate Zone	7A or 7B				
Design Option:									
Section A: Prescrip	tive								
All calculations and		Conversions:							
form to be considered complete and be accepted for re-				R = 5.678 x RSI	U = 1 / RSI				
HRV / ERV: Yes		No 🗌		L					
Effective Thermal Resistance of Above Ground Opaque Building Assemblies (RSI)									
Assembly		w/ HRV	w/o HR\	/ F	Proposed

## **ENERGY EFFICIENCY COMPLIANCE FORM**

Section 9.36 of the National Building Code of Canada

HVAC Equipment Performance Requirements								
Equipment	Capacity k	Standard		Min. Efficiency	Proposed			
Gas Fired Furnace	<u>&lt;</u> 65.9	CSA P.2		AFUE≥ 92%				
w or w/o A/C	> 65.9 & <u>&lt;</u> 11	7.23 CAN/CSA-P		B E <sub>t</sub> ≥78.5%				
Electric Boiler	<u>&lt;</u> 88				1)			
Gas Fired Boiler	≤ 88		CSA P.2		AFUE ≥ 90%			
	> 88 & <u>&lt;</u> 117.23		AHRI BTS		Et≥ 83%			
Other								
Heat Loss/Heat Gain Calculation	Calculations were prepared in conformance				ce with CSA F280	BTU		
Nomenclature	AFUE= annual fuel utilization efficiency, E₁= thermal efficiency							
Water Heaters Performance Requirements								
Equipment	Capacity KW	St	tandard		Min. Efficiency	Proposed		
	<u>&lt;</u> 12 kW			SI	$\leq 35 + 0.20 \text{V (top inlet)}$			
Tank Storage Electric	(50 L to 270 L capacity)		CAN/CSA-C191		≤ 40 + 0.20V (bottom inlet	t)		
	< 12 kW	CAN			(O.472V) - 38.5 (top inle	t)		
	(>270 L and ≤ 454 L capacity)			SL <u>&lt;</u>	(0.472V) - 33.5 (bottom inle	et)		
	>12 kW (>75 L capacity)	DO	.10.3/CSA 4.3 & E 10 CFR, 31, Subpart G		S = 0.30 + 27 / V <sub>m</sub>			
Tank Storage Gas Fired	< 22 kW	CAN	N/CSA-P.3		$EF \ge 0.67 - 0.0005V$			
	≥ 22 kW	ANSI Z2	1.10.3/CSA 4.3	_	0% and standby loss <u>&lt;</u> rate nput/(800 + 16.57)(√V)	ed		
	≤ 73.2 kW	CAN/CSA-P.7			EF ≥ 0.8			
Tankless Gas Fired	> 73.2 kW	ANSI Z21.10.3/CSA 4.3 and DOE 10CFR,Part43I,SubpartG		E ≥ 80%				
Tankless Electric	No standard addresses the performance efficiency; however, their efficiency typically approaches 100%							
Other								
$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$								

<sup>(1)</sup> Must be equipped with automatic water temperature control. No standard addresses the performance efficiency; however their efficiency typically approaches 100%

#### ENERGY EFFICIENCY COMPLIANCE FORM

Section 9.36 of the National Building Code of Canada

#### **Section B: Trade Off**

All calculations must be attached to this form to be considered complete and be accepted for review. The location and extent of assemblies used in the calculation shall be clearly identified on the drawings by hatch or note.

- □ Opaque to opaque − One or more above-ground opaque building envelope assemblies are permitted to be less than required, provided one or more above-ground opaque building envelope assemblies are increased to more than required.
  - Walls and joist type roofs must maintain minimum 55% of the required RSI<sub>eff</sub>
  - All other assemblies must maintain minimum 60% of the required RSI<sub>eff</sub>
  - The sum of the areas of all traded assemblies divided by their RSI<sub>eff</sub> must be less than or equal to what it would have been if all assemblies had met 9.36.2.6
- ☐ Transparent to transparent One or more windows are permitted to be less than required, provided one or more windows are increased to be more than required.
  - The traded windows must have the same orientation.
  - The sum of the areas of all traded windows divided by their RSI<sub>eff</sub> must be less than or equal to what it would have been if all windows had met 9.36.2.7
- □ Opaque to transparent This option is meant to allow reduced insulation for factory-constructed buildings with a low floor to ceiling height and a fenestration and door area to gross wall area ratio of 15% or less.

#### **ENERGY EFFICIENCY COMPLIANCE FORM**

Section 9.36 of the National Building Code of Canada

# **Section C: Performance**

This option is available only to houses with or without secondary suites, and buildings that contain only dwelling units with common spaces that are less than 20% of the building's total floor area.

The modelling summary reports for both the reference and proposed house generated from Hot2000 or the ANSI/ASHRAE 140 compliant software are required to be attached to this form to be considered complete and be accepted for review.

Input parameters				R	eferen	ce Model	Pı	Proposed Model			
Airtightness (air exchanges per hour @ 50 Pa)											
Heat Loss/Heat Gain											
HRV efficiency											
Thermal mass (MJ/m <sup>20</sup> C)											
Ventilation rate (I/s)											
Fenestration and door to wall ratio (FDWR) – reference (%)
